

## Putting the Pedals on your Ultimate Wheel

1. Your Ultimate Wheel comes without the pedals attached. It should only take 5 minutes to assemble.
2. Fit the pedals onto the correct side by matching the letter on the Ultimate Wheel with those on the pedals. Tighten firmly using your 15mm bike type pedal wrench; the left hand crank has a reverse thread.
3. Use the valve on the tube, to check that the tire is pumped up to the appropriate pressure. Tire pressure depends on personal preference. In general, tire pressures for freestyle or road riding should be very firm, while tire pressures for Muni and trials are somewhat lower. Experiment with this until you find a tire pressure that you like.

## Things that can go wrong!

Loose pedals; Tighten immediately! Normally found when riding or by holding the pedal and wobbling it.

Do not ride backwards for long periods or with loose pedals, as this will destroy the pedal threads. Damage resulting from this kind of riding is not covered by your warranty.

Always check before riding that your right foot is on the right pedal and left foot on the left pedal.

Always wear safety gear. Safety is your own responsibility.

What should be in your box?

- Wheel
- Pedals
- Pedal Wrench

You are going to need a bicycle pump (Car Valve)
